

THE METER THAT TELLS YOU
EXACTLY WHAT YOU'RE DOING

World's Latest – Wema GPS Speedo tells you the truth, regardless of the conditions at sea

Wema launches the world's latest GPS Speedo, the speedometer that precisely shows actual speed (speed over ground) and actual heading (compass heading over ground), both are guided by GPS signals. This is suitable for all types of boats (12V), and is in no way dependant of the boats main control and monitoring systems.

This is pure plug and play.
